Retail Projects: Project Management in Fast Forward

Retail projects aren't your average construction projects; they run faster than most commercial projects, there's no time for traditional paperwork, and every delayed day results in another day without sales.

How do you balance the rapid pace of construction while producing quality stores on time and on budget? Enter: Procore. The success of construction projects depends on how effectively the parties involved collaborate and share current information in the field. As projects evolve, contractors must rely on one another to quickly provide current information to build according to design, and keep the project on schedule.

Excel Doesn't Cut It

Procore's integrated platform is designed for the field, providing a real-time collaborative environment to help construction teams access up-to-date project details, keeping the project on schedule and on budget. Managing projects in Procore gives stakeholders real-time visibility into each project, creating an auditable record of all activity, and improving project delivery speed to open business doors faster.

Achieve your Business Goals

MANAGE ALL LOCATIONS ON ONE PLATFORM

Consolidate and organize your portfolio activity into one consistent format. Eliminate double-entry and replace point solutions with an integrated platform.

GAIN PROJECT VISIBILITY

Provide transparency across your portfolio to track progress of all locations. Monitor open items, approve or reject change orders, alleviate bottlenecks, and report on performance metrics.

OPEN LOCATIONS FASTER

Collaborate, manage, and share information in Procore so it is instantly accessible to the office and field. Streamline the flow of information, allowing construction teams to work efficiently.

MITIGATE RISK

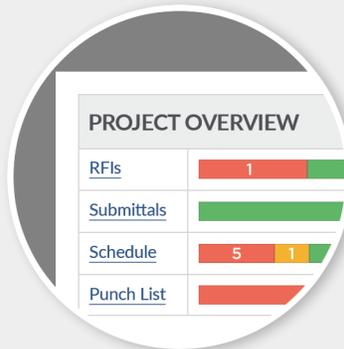

Maintain all historical records and project activities in Procore. Track approvals, changes, comments, and emails using date and time stamps.

Why Owners Choose Procore

USER-CENTRIC

Our team works collaboratively with users to build Procore. We work hand-in-hand with clients and users to design new features at our Innovation Labs.

SIMPLE

After we understand our clients' needs, our design and engineering teams create technology that is intuitive, helping clients easily achieve their goals in less time.

FASTEST TIME-TO-VALUE

Procore's user-centric product development makes it inherently easy to use. This allows for quick implementation, widespread adoption, and ultimately ROI.

What makes Procore the best solution?

Procore has more than double the users of competing products with over a million users, tens of thousands of projects around the world, and an ever-growing user community experiencing over 100% growth year over year. Procore strives to build software that teams want to use again and again, and unlike other point solutions that inherently limit collaboration through restricted seat licenses, Procore encourages all project collaborators, subcontractors, engineers, architects, and owners to leverage the platform.

COLLABORATIVE

Unlimited users at no additional cost. Bring your entire project team on board including subcontractors and third-party consultants.

DRAWING-CENTRIC

Projects begin and end with drawings. As the interactive center of project management, drawings can be marked up and attached to related documentation such as submittals and RFIs.

MOBILE

Procore's iOS and Android apps deliver information to the builders in the field, with or without an Internet connection, ensuring team members are up-to-speed on the current plans.

OPEN PLATFORM

Procore's open API enables retail owners to integrate with other systems. This includes accounting software, scheduling software, storage software, reporting software, and more.
